

REMOTE VIDEO MONITORING

Add an essential human layer to AI-powered surveillance for a fast and accurate response.

Let trained personnel evaluate and respond to potential threats and eliminate false alarms — without increasing your in-person guard staff. Eagle Eye Remote Video Monitoring spotlights and securely transmits incident video, which is analyzed by AI to evaluate and tag them for review, thereby avoiding expensive false alarms. Trained staffers then determine whether an alert is legitimate, whether an ongoing threat exists, and how to react effectively.

These monitoring center professionals review and respond to incidents according to customized escalation plans. These plans are designed to align with an organization's standard operating procedures, offering a range of messaging options and human-driven actions. Simply letting trespassers or thieves know they're on camera with an audible message in real time, on-site alarms, or lights can be enough to deter many criminal incidents.

Where human intervention meets AI

Eagle Eye Remote Video Monitoring (RVM) streams camera feeds from the Eagle Eye Cloud VMS directly and securely to monitoring centers. Advanced analytics filter out non-critical events, ensuring operators are only alerted to activity that truly matters. Instead of being overwhelmed by non-threatening events, monitoring professionals receive only actionable video that requires human intelligence to evaluate and respond.

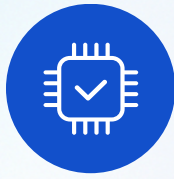

Features and benefits

- ✓ **Reduced security costs**
Augment or replace expensive guard services with a more effective and affordable solution.
- ✓ **Proactively deter crime**
Intervene in suspicious activity with live talk-downs and alarms to stop theft, vandalism, and trespassing before damage occurs.
- ✓ **Ensure faster response**
Provide law enforcement with video verification of a crime in progress, leading to a higher-priority dispatch.
- ✓ **Seamless integration**
Works seamlessly with existing surveillance cameras, eliminating additional equipment costs.
- ✓ **Fixed monthly fee**
Affordable, predictable per-camera pricing with no surprise fees or "per-event" charges.
- ✓ **Flexible viewing and control**
Remote Video Monitoring professionals can control cameras with pan-tilt-zoom (PTZ) controls for more precise viewing.
- ✓ **Customizable and scalable**
Easily adjust monitoring hours and set up different protocols based on specific situations.

How Remote Video Monitoring works

Event detected by
cameras or sensor

AI verifies the event to
minimize false alerts

Monitoring professional
evaluates and responds

Alerts and action
summaries dispatched
to the customer

Upgrade existing cameras with remote analysis.

Eagle Eye Remote Video Monitoring is camera-agnostic and does not require the purchase of any new equipment. The output of your existing cameras can be shared transparently and securely with the remote monitoring center. Existing camera deployments can also simultaneously benefit from other analytics available through the Eagle Eye Cloud VMS.

A range of providers and service level

Remote video monitoring through the Eagle Eye Cloud VMS does not limit you to a single service provider, schedule, or level of service. You can choose from a broad range of services, based on your budget, geographic needs, industry requirements, and other factors, without the complication of multiple bills.
